

IT asset management software

Full visibility and control over hardware, software, and cloud infrastructure

Hornbill IT asset management simplifies management of IT assets across the whole lifecycle.

→ Struggling to keep software licence compliant?

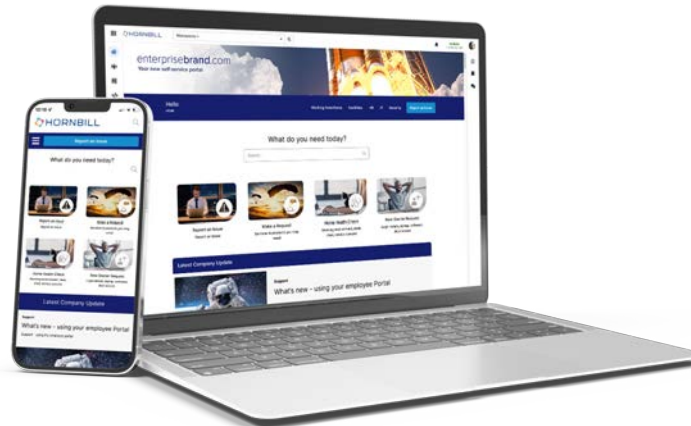

Optimize license spend with clear visibility of licenses owned and used. Reduce costs and risk of vendor audit.

→ Losing time to routine ITAM tasks?

Cut operational ITAM workloads in half with workflow automation. Automate routine tasks like application provisioning and patch deployment.

→ Unsure what hardware and software you have?

Automated discovery of cloud and on-premise hardware and software assets. No more audits, just fresh, accurate data. Track and manage IT assets across the whole lifecycle.

Optimize every aspect of IT asset management

Full visibility of hardware and software assets, on-premise, and cloud, accelerates change planning and reduces business risk.

Redundant or underused assets can be reclaimed for use elsewhere.

Slash operational costs and make time for strategic IT projects by automating ITAM tasks.

"We can see where our assets are and who has them."

ITAM with Hornbill benefits

- ✓ Track hardware, software, cloud and on-premise assets across the whole lifecycle.
- ✓ Streamline and automate ITAM processes with drag-and-drop workflows.
- ✓ Single data model enables ITAM, ITOM, ITSM and security teams to share data.
- ✓ Clear visibility of licenses owned vs used reduces costs and vendor audit risks.
- ✓ Track and report on capex and opex costs, including support costs.
- ✓ Simplify vendor audit responses with up to date license compliance data.

What's different about Hornbill?

No upgrade problems.

Continuous, delivery of new features. You spend zero time spent on upgrades.

100% codeless

Model and automate ITAM processes in minutes with drag-and-drop workflows.

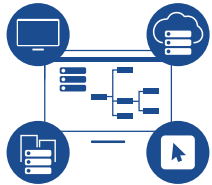

2x faster go-live.

Get the ITAM tech you need twice as fast with simple setup

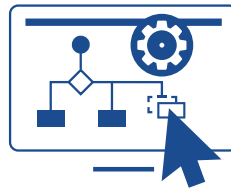

IT asset management software

What can you do with Hornbill?

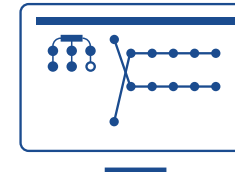

→ Asset lifecycles

Track and manage IT assets from procurements to retirement. Share data between ITAM, ITOM, ITSM and security teams. Quickly pinpoint key areas for improvement-driving rapid maturation of your ITAM program.

→ ITAM automation

Streamline and automate ITAM processes with drag-and-drop workflows. Automate the discovery of hardware and software across your premises and the cloud. Automate routine tasks like app provisioning and patch deployment.

→ Cost tracking

Track and report capex and opex costs, including support costs for a complete and accurate picture of ITAM economics. Real time visibility of software licenses in use versus licenses owned makes it easy to ensure compliance while avoiding license overspend.

“Hornbill's asset manager has really helped to ensure all our assets are recorded in one place and we can track hardware from cradle to grave.”

✓ IT asset tracking

Track hardware, software, cloud and on-premise assets from procurement to retirement.

✓ Rich asset history

Asset and cost information provides deep insights for better investment decisions.

✓ Optimize license spend

Reduce software costs and the risk of vendor audits with clear visibility of licenses owned and used.

✓ Enterprise-class CMDB

Hornbill's single data model enables data sharing between ITAM, ITOM, ITSM and security teams.

✓ Endpoint management integration

Integration with a broad range of endpoint solutions such as Microsoft Intune.

✓ Reduce patch backlogs

See all endpoint devices and their patch status. Automate patch deployment with codeless drag-and-drop workflows.

✓ ITAM automation

Quickly streamline and automate ITAM processes with drag-and-drop workflows.

✓ Cost tracking

Track and report capex and opex costs, including support costs for a complete and accurate picture of ITAM economics.
