SCHEDULE 2

Protective Measures - Hornbill Data Security Guide

Hornbill Security Policy

Hornbill Technologies Limited (HTL) is the operating company responsible for hosting the SaaS Service and its supporting infrastructure. The Board of Directors and senior management of HTL have defined an Information Security Policy which provides the governance against which HTL is committed to preserving the confidentiality, integrity and availability of all physical and information assets owned, controlled and Processed by the company. HTL is committed to implementing a Secure Operating Model structured and conformant with the internationally recognised standard for an Information Security Management System (ISMS) ISO/IEC 27001:2013.

Information Security

The HTL ISMS is intended to be an enabling mechanism for safeguarding commercially sensitive information and Personal Data Processed within electronic systems and manual filing systems, from accidental, or unlawful destruction, loss, alteration, unauthorised disclosure or access. HTL regularly tests, assesses and evaluates the effectiveness of the ISMS and will from time to time update the ISMS to address new and evolving security threats, technologies and changes to industry standard practices, although no such updates will materially reduce the commitments, protection or overall levels of service provided to the Customer as described herein.

Risk Management

- 3.1. **Risk.** HTL evaluates strategic and operational risks on an ongoing, 'as necessary' basis. Risk assessments are carried out whenever there is a change to any of the Assets as defined at section 7 below (e.g. addition or removal of physical assets), to the scope of the Information Security System, changes to code or to the risk environment.
- 3.2. The impact that might result from each threat-vulnerability is defined in accordance with the risk assessment methodology against the value of the Asset which the threat-vulnerability combination would exploit and this figure is held for each attribute within the Risk assessment matrix.

- 3.3. **Vulnerability Management.** HTL as a matter of process undertakes to assess on a regular basis all software and hardware for vulnerabilities identified using industry recognised sources such as vendor information, CVE\NIST lists and internal testing regimes.
- 3.4. All critical vulnerabilities are either resolved, patched or mitigated by process within the specified timeframe and according to the process as defined in the HTL vulnerability management operating procedure in force at such time.

Management Systems

- 4.1. **Data Protection and Privacy.** HTL is committed to compliance with all national and, where appropriate, international laws relating to the protection of Personal Data and individual privacy (including GDPR); this policy applies to all Personal Data Processed by HTL. Personal Data is classified as Restricted and only accessible on a need-to-use and event-by-event basis; by authorised HTL Personnel who need to deal with it.
- 4.2. **Compliance with Security Policies and Standards.** HTL continuously reviews and audits operations, security arrangements and controls for compliance, evaluating and implementing appropriate actions to ensure conformance with the ISMS.
- 4.3. **Penetration Testing.** In addition to regular internal testing HTL contracts third party security organisations, at least annually, to perform penetration testing to identify vulnerabilities and remediation steps that will help to increase the security of the HTL service.

Mobile Security

- 5.1. **Technical Security Measures.** The HTL ISMS defines rigorous policies in respect to mobile security and requires mobile devices (laptops, mobile computers, PDAs, mobile phones, USB sticks and other similar memory devices) to have: (i) password protection, (ii) where appropriate/possible and to be encrypted, (iii) the most recent operating system and application security-related patches, fixes and updates installed.
- 5.2. **Operational Measures.** HTL requires that; (i) notebook computers are physically protected against theft and damage while in transit, in storage or in use and that, in cases of loss or theft this is reported immediately. (ii) users are appropriately trained, understand and can carry out their agreed security obligations.

HR Security

- 6.1. **Personnel Security.** HTL undertakes vetting of Hornbill Personnel with access to Personal Data in line with its current published operating procedures and subject to applicable law(s).
- 6.2. **Confidentiality.** Employees, with access to Personal Data, are provided with and sign a contract of employment which includes a confidentiality agreement covering the various responsibilities and actions required of signatories in order to avoid unauthorized information disclosure, the permitted use of the information, the signatories' rights in respect of that information and the required actions on termination of the agreement.

Asset Management

- 7.1. **Asset Inventory.** HTL maintains a single inventory of information assets, each of which has defined ownership and is classified as; (i) hardware (all computing and information processing equipment, including printers, fax machines, photocopiers, etc.), (ii) software, information/database (e.g. software, software media etc.), intangible, service (which includes designated secure areas), (iii) people (those individuals whose skills, knowledge and experience are considered essential), and (iv) other assets. This inventory is the asset inventory that is used in the risk assessment process.
- 7.2. **Asset Ownership.** For each asset, HTL defines the business unit or business role that 'owns' the asset and is therefore responsible for ensuring that the asset is correctly classified and for the day to day maintenance of the identified controls.

Information Classification & Handling

- 8.1. **Information Classification.** HTL classifies information to three (3) levels: restricted, confidential, and public. Information that is classified as restricted must, in addition, identify the individuals or roles to whom the information is restricted. Personal Data subject to Data Protection Legislation is classified as restricted and is subject to the policies as documented in the HTL operating procedure for Information Classification and Handling.

Access Control

- 9.1. **Access Management.** Access to the SaaS Service from HTL is by Hornbill Personnel and Sub-processors is secured, managed and protected through stringent authentication, segregation and authorisation processes and mechanisms, overseen by the HTL ISMS manager. A formal registration and deregistration process is adhered to and privileges are allocated on a need-to-use and event-by-event basis. A log is maintained of all privileges authorised and allocated and this is audited regularly to ensure privileges; (i) have been revoked as specified in the original request, (ii) continue to be valid and appropriate for the intended purpose, (iii) have not been obtained without the appropriate authorisation. User access rights are reviewed upon change to maintain effective control over access to data information services.
- 9.2. **Technical and Network Access Controls.** HTL employs a wide range of measures and controls including, but not limited to; (i) Secure log-on, (ii) Network access controls, including VPN's and Firewalls with controlled ports. (iii) Network segregation with defined inter-network connection protocols and routing. (iv) Real time monitoring and logging against HTL instances and infrastructure to detect logins, unusual access and or unexpected data transfers. (v) Logs are reviewed (automatically) for warnings and corrective actions taken to address any concerns (For example, any port scanner or other bot probing would be blocked from all access).
- 9.3. **Service Access Controls.** The SaaS Service provides extensive and granular user and role-based access controls. The Customer is solely responsible for the management, configuration and confidentiality of such access controls within its HTL instance and must assign to each user secure credentials and user role controlling the individuals level of access to the SaaS Service.

Cryptography Controls and Usage

- 10.1. **Data Encryption.** All data is encrypted in transit, and where possible specific fields are encrypted at rest using industry recognised cryptographic measures, TLS Encryption. All backups are fully encrypted. All data in motion is encrypted either via HTTPS\SSL.
- 10.2. Full at rest encryption (AES-256), of the Customers HTL instance, is available to all Customers.

Physical and Environment Security

- 11.1. **Data Centre Facilities.** HTL delivers the SaaS Service from data centres within the Customers chosen Hosting Zone (data protection jurisdiction) that have attained SSAE16 and ISO27001 certification.
- 11.2. Physical access restrictions in place will include a combination of any of the following: External and internal CCTV systems, proximity access controls, access card biometric authentication, mantrap, intruder alarms, door tampering alarms, appropriate perimeter deterrents (e.g. fencing, guarded gates), on site guards and secure managed loading dock; and (ii) fire suppression and detections systems in all areas.
- 11.3. **Secure Management and Disposal of Equipment.** Assets. The HTL Chief Technical Officer is responsible for the secure disposal of storage media and the disposal of all information processing equipment. Destruction of storage media and information processing equipment is undertaken to industry standards with the physical destruction of decommissioned or damaged hard disks storing Personal Data undertaken in line with WEEE regulations through HTL's approved contractor.

Operations

- 12.1. **Capacity Management.** Network capacity, utilisation, disk utilisation and load are proactively monitored, with automated alerting, to ensure that the SaaS Service has sufficient capacity of current and anticipated needs.
- 12.2. **Monitoring.** Each HTL instance is monitored from multiple locations globally with checks on over one hundred individual metrics undertaken every five minutes including but not limited to; (i) Performance (Pings, DNS Propagation, Response times from API, CPU Load, RAM Load, Disk IO, network Load etc.), (ii) Hardware (Availability, Temperature, SMART, SNMP etc.), (iii) Capacity (Disk space, CPU, Ram, etc.), (iv) Availability (Ping, DNS Propagation, API Tests, Host controller checks etc.), (v) Security (Automated Log file reviews, Traffic review, Pattern analysis, etc.), (vi) IDS (Intrusion Detection, Suspicious or Malicious Traffic Analysis including, packet \ bandwidth \ source \ traffic monitoring), (vii) Data Leakage (Packet\bandwidth\Source & Destination \ traffic monitoring and Analysis), (viii) Backups (Sync checks, replication checks, off instance checks etc.) and, (xi) Sanity (Checks for Mail Queues, Expected load etc.).

Supplier Relationships and Procurement

- 13.1. HTL carries out risk assessments to identify and implement specific controls before granting access to third parties or customers in line with the published operating procedures in force at such time. Identification of risk related to external party access takes account of the following: (i) level of physical access, (ii) logical access, (iii) legal and regulatory requirements and other contractual obligations relevant to the external parties. HTL defines and agrees with the external party those controls that the external party is required to implement and documents them in a signed contract or agreement.

Changes are not approved for implementation until fully risk assessed and where required defined fall-back procedures or a roll back strategy must be prepared. Where the change is significant, a testing plan, complete with clear acceptance criteria (including business, technical and load criteria) must be documented prior to commencing the change testing, which may include a dry run of the change.
- 14.2. **Promotion to Production Environment.** All testing is conducted in a test environment which is configured for that specific test requirement. This is separated from operational facilities by logical means. Once proved to be effective the HTL Cloud Service Manager authorises the implementation of the change to the

operational environment, ensuring that business processes are not disturbed and that business continuity plans are updated if appropriate.

Business Continuity and Disaster Recovery

- 15.1. **Business Continuity.** HTL are committed to providing customers with access to the SaaS Service and data even in the event of an emergency or disaster. HTL's emergency plan is designed such that in the worst possible case Customers will be without access to instances for the minimum time possible whilst a full restore is carried out to a secondary data centre.
- 15.2. **Backups.** All databases relating to the SaaS Service are replicated in real time to a secondary data centre. All files are replicated every 5 minutes. Replicas are subsequently backed up (individual secure archive encrypted with 1-time key) daily and stored in a tertiary location within the Customers contracted hosting zone. The backups are taken without any interruption of services.
